MARSTURBATE

Marsturbate Protocol

Morality Based Investing? It's only your Personal Choice!

**It's your sex, it's you life, it's your orgasm!!!**

There are so many ways to masturbate, so how can you really know which is the best ways to do so?

In fact, we are rather creative when it comes to masturbation.

Hands-free masturbation…
Sofa masturbation…
Shower masturbation…
Etc…

And now the beginning of a new era: *Marsturbate!* *Crypto Marsturbate!*

Let's have a look and then… *help yourself:*

MARS*TURBATE*

==========

1.First Porn NTFs Exchange

2.Static Rewards

3.Manual Burn

4.LP Acquisition

==========

Investment is something that you choose to do.

Many people hide behind a lot of different serious faces when they invest in certain solid companies and industries.

In reality there is no 'Morality Investment Police' out there.

MARS TURBATE

The only one you will have justify anything to it's only yourself when you are in front the mirror.

A common misconception with the heavy APY average is the subjectivity of the impermanent loss from staking an LP (liquidity provider) in a farming reward generator.

With the explosion of DeFi we have seen too many new cryptocurrency prospectors get sucked into a high APY LP-farming trap, feeling hopeless as they are pushed out by earlier buyers with higher staking rewards.

We've all been there, seeing those shiny 6 digit figures can be pretty damn tempting to jump in.

However, almost always the token suffers from the inevitable valuation bubble, which is then followed by the burst and the impending collapse of the price.

This Is why we have seen the mass adoption of static rewards, also known as reflection, a separate concept that seeks to eliminate the troubles caused by farming rewards.

Just do what you think is right and don't hurt anyone
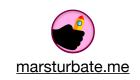

1. First Porn NTFs Exchange
Why?

Because everyone wants porn in his life.

We'll build a marketplace, simple, sexy, that allows you to mint NFTs and sell'em in BSC.

Everyone is minting so much NFTs that can cover all seas, why don't mint it for porn?

We'll launch also an Exchange and an App for everyone.

2. Why Static?

Static rewards solve a host of problems.

First, the reward amount is conditional upon the volume of the token being traded.

This mechanism aims to alleviate some of the downward sell pressure put on the token caused by earlier adopters selling their tokens after farming crazy high APY's.

Second, the reflect mechanism encourages holders to hang onto their tokens to garner higher kick-backs which are based upon a percentages carried out and dependant upon the total tokens held by the owner.

MARSTURBATE

3. Manual Burns

A continuous burn on any one protocol can be nice in the early days, however, this means the burn cannot be finite or controlled in any way.

Having burns controlled by the team and promoted based on achievements helps to keep the community rewarded and informed.

The conditions of the manual burn and the amounts can be advertised and tracked.

MARSTUBATE aims to implement a burn strategy that is beneficial and rewarding for those engaged for the long term.

Furthermore, the total number of MARSTUBATE (MRST) burned is featured on our readout located on the website which allows for further transparency in identifying the current circulating supply at any given point of time.
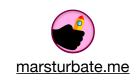

4. Automatic Liquidity Pool (LP)

Automatic LP is the secret sauce of MARSTUBATE (MRST).

Here we have a function that acts as a two-fold beneficial implementation for holders.

First, the contract sucks up tokens from sellers and buyers alike, and adds them to the LP creating a solid price floor.

Second, the penalty acts as an arbitrage resistant mechanism that secures the volume of MARSTUBATE (MRST) as a reward for the holders. In theory, the added LP creates a stability from the supplied LP by adding the tax to the overall liquidity of the token, thus increasing the tokens overall LP and supporting the price floor of the token.

This is different from the burn function of other reflection tokens which is only beneficial in the short term from the granted reduction of supply.

MARS*TURBATE*

As the MARSTUBATE (MRST) token LP increases, the price stability mirrors this function with the benefit of a solid price floor and cushion for holders.

The goal here is to prevent the larger dips when whales decide to sell their tokens later in the game, which keeps the price from fluctuating as much as if there was no automatic LP function.

All of this is an effort to alleviate some of the troubles we have seen with the current DeFi reflection tokens.

We are confident that this model and protocol will prevail over the outdated reflection tokens for these reasons

Tokenomics

Total Supply: **1,000,000,000,000,000**
Burned Dev Tokens: **693,351,666,205,101** (3/4)
Fair Launch Supply: **100,000,000,000,000**

MARS *TURBATE*

MARSTUBATE Protocol

MARSTURBATE (MRST) employs 3 simple functions:

Reflection + **LP acquisition** + **Burn In each trade (PCS V1)**, the transaction is taxed a 10% fee, which is split 2 ways:
• 5% fee = redistributed to all existing holders
• 5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the MARSTUBATE tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

Marsturbate: Your Number One Stress Investment Technique! Start now... Don't stop anymore.

Sincerely yours, *ONAN*.
